Pré-tendre que la vapeur des latrines est acide, c'est prononcer contre l'expérience; elle démontre qu'elle est alcaline et très dangereuse à respirer; enfin, elle démontre que la chaux et les alkalis fixes augmentent l'énergie du méphitisme, tandis que les acides le détruisent. 31 pp. 12°. *Vienne, Ve. —. Troisième lettre à M. Cadet. Tous les chymistes ont vérifié que l'air inflammable fait partie de l'alkali volatil qui s'exhale des matières putrides, et qui cause la mort à ceux qui y sont exposés; c'est donc à tort qu'on prétend que le vinaigre, en neutralisant l'alkali volatil, développe le gaz inflammable, il est impossible que cet acide neutralise et développe la même exhalaison. 26 pp. 8°. *Vienne*, 1784.

—. Quatrième lettre à M. Cadet. La matière des latrines ne produit point de foie de soufre; c'est mal à propos qu'on a accusé le vinaigre de le décomposer. Tout les nez sont compétents pour décider si le vinaigre remédie à l'odeur méphitique. 24 pp. 8°. *Vienne*, 1784.
